READY FOR SCHOOL

COULD YOUR CHILD HAVE A VISION PROBLEM?

Take this simple yes or no assessment for your child. If you answer "yes" to more than one question, or your child has not seen an optometrist in over two years, it's probably time to schedule an appointment.

DOES YOUR PRE-SCHOOLER: Yes No Have an eye that ever appears to be out of proper alignment Tend to bump into objects Have red eyes or lids Rub eyes frequently Have excess tearing Turn or tilt head to use one eye only Have encrusted eyelids Have frequent styes Avoid coloring, puzzles or detailed activities Experience difficulty with eye-hand-body coordination

DOES YOUR SCHOOL-AGE CHILD:		
	Yes	No
Lose place while reading		
Avoid close work		
Hold reading material closer than normal or shift the reading distance		
Tend to rub eyes		
Have headaches		
Turn or tilt head to use one eye only		
Make frequent reversals when reading or writing		
Use finger to maintain place when reading		
Omit or confuse small words when reading		
Consistently perform below potential		
Struggle to complete homework		
Regular eye exams, starting when your child is just six months old, by a doctor of optometry can help you be certain that your child's vision is developing normally. Since vision changes can occur without you or your child noticing them, your child should visit the optometrist at least every two years, or more frequently, if specific problems or risk factors exist. If needed, the doctor can prescribe treatment including eyeglasses, contact lenses or vision therapy. Keep in mind, a school vision screening, while		
helpful, is not a substitute for a comprehensive eye examination . Schedule your child's back-in-school eye		

examination to make the most of a good education.
